

KENNEL CLEANING & SANITATION

Kennel Cleaning & Sanitation was brought to live as a division of the

Group after numerous calls was received by Kennels & Veterinary

Clinics to clean and decontaminate affected kennels due to infectious diseases.

To name just a few:

Canine parvovirus ("parvo")

Parvo is caused by the canine parvovirus type 2. The virus is very contagious and attacks the gastrointestinal system, causing fever, vomiting and severe, often bloody, diarrhea. It is spread by direct contact between dogs as well as by contaminated stool, surfaces, bowls, collars, leashes, equipment, and the hands and clothing of people. It can also survive in the soil for years, making the virus hard to kill. Treating parvo can be very expensive and many dogs die from parvo despite intensive treatment.

Canine influenza ("canine flu" or "dog flu")

Canine influenza is caused by the canine influenza virus. It is a relatively new disease in dogs. Because most dogs have not been exposed to the virus, their immune systems are not able to fully respond to the virus and many of them will become infected when they are exposed. Canine influenza is spread through respiratory secretions, contaminated objects (including surfaces, bowls, collars and leashes). The virus can survive for up to 48 hours on surfaces, up to 24 hours on clothing, and up to 12 hours on people's hands. Dogs with canine influenza develop coughing, a fever and a snotty nose, which are the same signs observed when a dog has kennel cough.

External parasites (ticks, fleas and mange)

External parasites, such as ticks, fleas and mange, are fairly common dog problems. Ticks from the environment, fleas from other dogs and the environment, and mange from other dogs pose risks at dog gatherings. Ticks can transmit diseases. Fleas can transmit some types of tapeworms as well as some diseases, and they may end up infesting your home and yard if they hitchhike home on your dog(s).

Kennel cough (also known as canine infectious tracheobronchitis) is an upper respiratory infection affecting dogs. There are multiple causative agents, the most common being the bacterium *Bordetella bronchiseptica*, followed by canine parainfluenza virus, and to a lesser extent canine coronavirus. It is highly contagious; however adult dogs may display immunity to reinfection even under constant exposure. Kennel cough is so named because the infection can spread quickly among dogs in the close quarters of a kennel or animal shelter. Viral and bacterial causes of canine cough are spread through airborne droplets produced by sneezing and coughing. These agents also spread through contact with contaminated surfaces. Symptoms begin after a several day incubation period post-exposure, and in most cases will clear up on their own. However, in young puppies or immunocompromised animals, mixed or secondary infections can progress to lower respiratory infections such as pneumonia.

care about your your loved ones. All your loved ones.

CSC specialises in the cleanup and decontamination of all potentially infected areas, and are able and available to assist you with big or small projects, keeping your areas safe, clean and decontaminated.

The following options are available to suit your needs:

Process indoor kennels:

- All loose items removed and individually sanitised by means of a chemical wash down.
- Cage to be cleaned and sanitised inside and out.
- Bedding to be steam cleaned with an anti-bacterial chemical and dried.
- Surrounding areas of the cages will be cleaned with an anti-bacterial chemical.
- Statement of clearance supplied as proof of professional decontamination to be supplied after each treatment.

Process outdoor kennels:

- All loose items removed and individually sanitised by means of a chemical wash down.
- Cage and floor (any type) to be cleaned and sanitised by uplifting elements from porous surfaces and cracks.
- Bedding to be steam cleaned with an anti-bacterial chemical and dried.
- Surrounding areas of the cages will be cleaned with an anti-bacterial chemical.
- Statement of clearance supplied as proof of professional decontamination to be supplied after each treatment.

Important note:

All CSC chemicals are bio-degradable, SABS approved and not harmful to humans and animals.

Cost of services:

Indoor kennels @ R300.00 per kennel

Outdoor kennels @ R500.00 per kennel

Large (dog run) kennels @ R700.00 per kennel

Contact us for a personal quote as costs become lower on quantity and frequency.
